

Executive KPI Dashboard

Task 26 | Level 2 | Data Analytics Track | Veda Technology Internship
Prepared by: Akshat Srivastava | Date: 03 October 2026 | Tool: Power BI Desktop

1. Objective

Design a concise, one-page management dashboard in Power BI with dynamic filters, summarising the sales performance of the Superstore dataset (2,500 orders, Jan 2023 - Dec 2025) for executives.

2. Headline KPIs

Total Sales	Total Profit	Profit Margin %	Total Orders	Avg Discount
\$4.65M	\$306K	6.6%	2,500	15.0%

3. KPI Definitions

KPI	Definition	DAX Formula
Total Sales	Total revenue generated after discounts	SUM(Superstore_Task26[Sales])
Total Profit	Revenue left after costs	SUM(Superstore_Task26[Profit])
Profit Margin %	Share of each sales dollar kept as profit	DIVIDE([Total Profit], [Total Sales])
Total Orders	Number of unique orders placed	DISTINCTCOUNT(Superstore_Task26[Order ID])
Avg Discount	Average discount given per order line	AVERAGE(Superstore_Task26[Discount])

4. Dashboard Components

Component	Visual type	Fields used
KPI cards (5)	Card	Total Sales, Total Profit, Profit Margin %, Total Orders, Avg Discount
Monthly Sales Trend	Line chart	Order Date (Month), Total Sales
Profit by Category	Clustered bar	Category, Total Profit
Sales by Segment	Donut chart	Segment, Total Sales
Sales by Region	Clustered bar	Region, Total Sales
Dynamic filters (4)	Slicers	Order Date (Year), Region, Category, Segment

5. Key Insights

- **Overall:** \$4.65M sales and \$306K profit across 2,500 orders, a 6.6% profit margin.
- **Category:** Technology leads in sales (\$3.46M); Office Supplies has the best margin (10.9%) while Furniture has the lowest (-3.5%).
- **Region:** Central is the strongest region (\$1.36M); South is the weakest (\$1.03M).
- **Segment:** Consumer contributes the largest share of sales (47%).
- **Yearly sales:** 2023: \$1.52M, 2024: \$1.64M, 2025: \$1.50M.
- **Discounting:** Higher discounts reduce margin, so discount levels should be monitored, especially in low-margin categories.

6. How to Use the Dashboard

Use the four slicers (Year, Region, Category, Segment) at the top to filter. All KPI cards and charts update together, so executives can drill into any slice of the business without opening multiple reports.

7. Note on Data

The dataset used is a synthetic Superstore-style sample (2,500 orders) prepared for this exercise. Values are illustrative and may differ from the original Kaggle Superstore dataset.
